What is VueScan?

- The world's most popular 3rd party scanning program, replaces the software that comes with the scanner

- Supports older scanners that don't work on newer O/S, including most Canon LiDE, Epson Perfection, Nikon Coolscan and HP OfficeJet scanners and many more

- Supports over 2900 scanners from 35 scanner manufacturers in a combination of Mac OS X, Windows and Linux

VueScan Summary Features

VueScan is powerful and easy to use:

- Scans documents, photos and film
- Over 50 advanced scanning features
- Creates PDF, JPEG, TIFF and TXT files
- 32-bit and 64-bit versions
- Recognises text using OCR and create multi-page PDFs using both flatbed scanners and scanners with automatic document feeders
- Auto-Crop Photos: Free Online Tool to scan and crop multiple photos at the same time. Available to use and soon to be fully integrated into VueScan
- Convert JPG to PDF: Free online tool to convert JPG to PDF
- Easy to use – has 3 options to work in – 'Basic' , 'Standard' and 'Professional'

VueScan Setup

- There are two editions of VueScan 9 –Standard and Professional - but only one file to download.

- VueScan Standard can be upgraded to Professional at any time.

- You can use VueScan on up to four different computers that you personally use, with any combination of operating systems, with any number of scanners, both x32 and x64, with a single license.

- You can use the version you purchase for as long as you want. You get free upgrades for one year with the Standard Edition and unlimited free upgrades with the Professional Edition.

How VueScan works:

- VueScan is unique as we support more than 2900 scanners even if there is no scanner driver available from the vendor.

- We independently reverse engineered how the scanners communicates with existing application software and implemented our own scanner driver to work on all operating systems. VueScan controls the scanner via the USB cable directly to the scanner.

- This allows us to support a scanner when there is no WIA Driver on Windows, Image Capture Driver on OS X, or a driver from the vendor.
